

compacer Finland Oy wins R-kioski

Leading kiosk and convenience chain relies on edbic for B2B messaging and benefits from more transparency and better communication

Gärtringen/Helsinki, 20 January 2021 – With R-kioski Oy, compacer Finland Oy, the Scandinavian subsidiary of the German IT service provider compacer, has gained another well-known client. The well-known convenience chain has implemented compacer’s smart solution for optimising the coordination efforts with its business partners.

R-kioski is a convenience store chain that operates 480 stores in Finland. The convenience stores, operated under a franchise agreement, offer food and beverages as well as goods and services for daily needs. In autumn 2020, R-kioski took its B2B messaging to the next level, replacing its existing solution with a combination of the edbic Business Integration Cluster and compacer Finland Oy’s Active Monitoring Service, integrating them with their new ERP landscape.

The roll-out of this new IT structure has made R-kioski’s day-to-day business much easier, because all data and product information is now clearly represented in one central spot. This restructuring has automated and simplified numerous work processes, making product management, controlling and communication with business partners much more efficient.

Maria Sjöroos, IT & HR Director at R-kioski, is pleased that the project was completed both on time and on budget: “The renewal of our B2B messaging solution fit very well with the strategy and integrity of our development project. The cost-efficient and above all flexible solution provided by compacer improves the quality and transparency of our operations. compacer Finland Oy really has done an outstanding job.”

Olli-Pekka Pauna, CEO at compacer Finland Oy, adds: “edbic is a very efficient and flexible modern integration platform that enables internal and external integrations with other systems, applications, user interfaces and APIs. In addition to traditional B2B integrations, edbic also includes synchronous communications.” edbic can be used either on-premise, from the cloud or as SaaS, giving R-kioski the maximum scope of action.
